Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

INTRODUCTION

The following management's discussion and analysis (the "**MD&A**") was prepared as at 22 August 2018 and is management's assessment of Falcon Oil & Gas Ltd.'s ("**Falcon**") financial and operating results and provides a summary of the financial information of the Company (as hereinafter defined) for the three and six months ended 30 June 2018. This MD&A should be read in conjunction with the unaudited interim financial statements for the three and six months ended 30 June 2018 and 2017 and the audited consolidated financial statements and MD&A for the year ended 31 December 2017 and 2016.

The Company's independent auditors have not performed a review on the unaudited interim financial statements for the three and six months ended 30 June 2018 and 2017.

The information provided herein in respect of Falcon includes information in respect of its wholly-owned subsidiaries: Mako Energy Corporation, a Delaware company ("**Mako**"); TXM Oil and Gas Exploration Kft., a Hungarian limited liability company ("**TXM**"); Falcon Oil & Gas Ireland Ltd., an Irish limited liability company ("**Falcon Ireland**"); Falcon Oil & Gas Holdings Ireland Ltd., an Irish limited liability company ("**Falcon Holdings Ireland**"); Falcon Oil & Gas USA Inc., a Colorado company ("**Falcon USA**"); Falcon Exploration and Production South Africa (Pty) Ltd., a South African limited liability company ("**Falcon South Africa**") and its 98.1% majority owned subsidiary, Falcon Oil & Gas Australia Limited, an Australian limited liability company ("**Falcon Australia**") (collectively, the "**Company**" or the "**Group**").

Additional information related to the Company, including the Company's Annual Information Form ("**AIF**") for the year ended 31 December 2017 dated 11 April 2018 can be found on the System for Electronic Document Analysis and Retrieval ("**SEDAR**") at www.sedar.com and Falcon's website at www.falconoilandgas.com.

Forward-looking statements

Forward-looking statements include, but are not limited to, statements with respect to: the focus of capital expenditures; Falcon's acquisition strategy; the criteria to be considered in connection therewith and the benefits to be derived therefrom; Falcon's goal to sustain or grow production and reserves through prudent management and acquisitions; the emergence of accretive growth opportunities; Falcon's ability to benefit from the combination of growth opportunities and the ability to grow through the capital markets; development costs and the source of funding thereof; the quantity of petroleum and natural gas resources or reserves; treatment under governmental regulatory regimes and tax laws; liquidity and financial capital; the impact of potential acquisitions and the timing for achieving such impact; expectations regarding the ability to raise capital and continually add to reserves through acquisition and development; the performance characteristics of Falcon's petroleum and natural gas properties; realisation of the anticipated benefits of acquisitions and dispositions; expectations regarding the ability of Falcon to access additional sources of funding not currently available; and Falcon's ability to leverage its experience in the unconventional oil and gas industry to acquire interests in licenses.

Some of the risks and other factors, which could cause results to differ materially from those expressed in the forward-looking statements include, but are not limited to: general economic conditions in Canada, the Republic of Hungary, the Commonwealth of Australia, the Republic of South Africa and globally; supply and demand for petroleum and natural gas; industry conditions, including fluctuations in the price of petroleum and natural gas; governmental regulation of the petroleum and natural gas industry, including income tax, environmental and regulatory matters; introduction of a moratorium; fluctuation in foreign exchange or interest rates; risks and liabilities inherent in petroleum and natural gas operations, including exploration, development, exploitation, marketing and transportation risks; need to obtain regulatory approvals before development commences; environmental risks and hazards and cost of compliance with environmental regulations; aboriginal claims; geological, technical, drilling and processing problems; unanticipated operating events which can reduce production or cause production to be shut-in or delayed; the ability of our industry partners to pay their proportionate share of joint interest billings; failure to obtain industry partner and other third party consents and approvals, when required; stock market volatility and market valuations; competition for, among other things, capital, acquisition of reserves, processing and transportation capacity, undeveloped land and skilled personnel; uncertainties inherent in estimating quantities of reserves and resources; the need to obtain required approvals from regulatory authorities; and the other factors considered under "**Risk Factors**" in Falcon's AIF dated 11 April 2018. The forward-looking statements contained in this document are expressly qualified by this cautionary statement. Falcon disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required under applicable securities regulation. In addition, other factors not currently viewed as material could cause actual results to differ materially from those described in the forward-looking statements.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

The following table outlines certain forward looking statements contained in this MD&A and provides material assumptions used to develop such forward looking statements and material risk factors that could cause actual results to differ materially from the forward looking statements.

Page No.	Forward looking statements	Assumptions	Risk factors
6	<p><i>Overview of the business and overall performance - About the Group</i></p> <p>This section of the document contains forward looking statements regarding the strategy of the Board of Directors of Falcon (the "Board") and the countries it believes support the exploitation of unconventional oil and gas.</p>	<p>The countries the Group operates support the exploitation of unconventional oil and gas.</p>	<p>These countries may change their regulatory environment adversely impacting the exploitation of unconventional oil and gas resources.</p>
7	<p><i>Overview of the business and overall performance – Beetaloo Basin, Northern Territory, Australia - Overview</i></p> <p>"the Beetaloo Basin is a relatively underexplored onshore exploration basin. The area is also remote and sparsely populated.... the Board believes the Beetaloo Basin has shale oil and shale gas potential."</p>	<p>The Beetaloo Basin is relatively under-explored and has shale oil and shale gas commercial potential.</p>	<p>As the Beetaloo Basin is relatively under-explored it may not have shale oil and shale gas commercial potential.</p>
7-8	<p><i>Beetaloo basin, Northern Territory, Australia –Transformational Farm out of Beetaloo unconventional acreage</i></p> <p>This section of the document from contains forward-looking statements pertaining to the work programme, expectations and bringing the project toward commerciality.</p>	<p>The work programme will continue and the project will be brought towards commerciality.</p>	<p>The risks are (1) Origin determines not to continue with the work programme and /or (2) the project is not brought to commerciality.</p>
8-11	<p><i>Beetaloo basin, Northern Territory, Australia – Discoveries and prospectivity</i></p> <p>This section details results of drilling to date and Origin EnergyB2 Pty Ltd. ("Origin") notification of discovery and an initial report on discovery ("Notification of Discovery") submission to the Department of Primary Industry and Resources of the Northern Territory ("DPIR") on the Amungee NW-1H well and the contingent gas resource estimate they prepared.</p>	<p>A discovery has been made and a material gas resource announced, the Beetaloo Basin will continue to be explored.</p>	<p>Despite the Notification of Discovery and the announcement of a material gas resource, commerciality may not be reached.</p>
9	<p><i>Beetaloo basin, Northern Territory, Australia – Discoveries and prospectivity</i></p> <p>This section of the document from "Key Details of the Discovery Evaluation Report..... royalties over the permits" includes details of what was submitted to the Northern Territory Government which indicated an original gas in place ("OGIP") of 496 trillion cubic feet ("TCF") over 16,145km². The section also includes Origin's gross contingent resource estimate of 6.6TCF over 1,968km².</p>	<p>The OGIP and contingent gas resource calculated are the best estimates based on the drilling results to date and other data (including seismic) available.</p>	<p>The OGIP and contingent gas resource are only estimates and the project may not be brought to commerciality.</p>
11	<p><i>Beetaloo basin, Northern Territory, Australia – Discoveries and prospectivity - Further information relating to disclosure of resources</i></p> <p>This section of the document which includes the table beginning with "Well Name..... to demonstrate that the project is technically feasible, and a development plan has been generated, economics can be run to determine commerciality of production." contains forward looking statements.</p>	<p>Resumption of work with our joint venture partner, Origin will start as soon as practical, adopting recommendations of the scientific inquiry and obtaining necessary approvals to complete the remaining work programme.</p>	<p>The risks are (1) there may be undue delay by the government in implementing the recommendations from the inquiry which would adversely impact the work programme and /or (2) the project is not brought to commerciality.</p>

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis

OVERVIEW OF BUSINESS AND OVERALL PERFORMANCE

About the Group

Falcon is an international oil and gas company engaged in the acquisition, exploration and development of unconventional oil and gas assets. The Company's interests are located in internationally diversified countries that are characterised by a high regional demand for energy and are close to existing infrastructure allowing for rapid delivery of oil and gas to market in Australia and Hungary.

Falcon's strategy is to leverage the Group's expertise in the unconventional oil and gas industry to acquire interests in licences covering large acreages of land and to build on its internationally diversified portfolio of unconventional assets and interests, which are located in countries that the Board believes support the exploitation of unconventional oil and gas. Falcon seeks to add value to its assets by entering into farm-out arrangements with major oil and gas companies that will fully or partially carry Falcon through seismic and drilling work programmes. The Group's principal interests are located in two major underexplored basins in Australia and South Africa; with further interests in Hungary, covering approximately 12.3 million gross acres in total. The carrying value at 30 June 2018 of the Company's interest in Australia is \$39.7 million, while the Hungarian asset is nil due to a determination in 2014 that the estimated recoverable amount was insufficient to cover the carrying value of the asset. For the South African interest, costs associated with the technical cooperation permit are expensed as incurred.

Falcon is incorporated in British Columbia, Canada and headquartered in Dublin, Ireland with a technical team based in Budapest, Hungary. Falcon's Common Shares are traded on Toronto's TSX Venture Exchange ("TSX-V") (symbol: FO.V); AIM, a market operated by the London Stock Exchange (symbol: FOG) and ESM, a market regulated by the Irish Stock Exchange (symbol: FAC).

Summary of Operations

The following table summarises the principal oil and gas interests of the Company in Australia, South Africa and Hungary:

Assets (Country)	Interest (%)	Operator	Status	Gross Area (km ²)
Exploration Permit EP-76 (Beetaloo Basin, Northern Territory, Australia)	30 ⁽ⁱ⁾	Origin ⁽ⁱⁱⁱ⁾	Exploration	1,891.3
Exploration Permit EP-98 (Beetaloo Basin, Northern Territory, Australia)	30 ⁽ⁱ⁾	Origin ⁽ⁱⁱⁱ⁾	Exploration	10,316.0
Exploration Permit EP-117 (Beetaloo Basin, Northern Territory, Australia)	30 ⁽ⁱ⁾	Origin ⁽ⁱⁱⁱ⁾	Exploration	6,412.0
Technical Cooperation Permit, (Karoo Basin, South Africa) ⁽ⁱⁱ⁾	100	Falcon	TCP	30,327.9
Makó Production Licence (Makó Trough, Hungary)	100	TXM	Production	994.6

Notes:

(i) Falcon owns 98.1% of Falcon Australia, which holds a 30% interest in the Beetaloo Exploration Permits. The remaining 1.9% interest of Falcon Australia is held by others.

(ii) In compliance with the terms of the Technical Cooperation Permit ("TCP"), the Company submitted its application for an exploration permit in August 2010. Local counsel has confirmed that despite the TCP expiry date of October 2010 having passed, the Company's interests remain valid and enforceable.

(iii) Falcon completed its farm-out with Origin Energy Resources Limited, a subsidiary of Origin and Sasol Petroleum Australia Limited, a subsidiary of Sasol Limited ("Sasol"), collectively referred to as (the "Farminees") on 21 August 2014. On completion, Origin was appointed as operator of the exploration permits. On 5 May 2017, it was announced that Origin had acquired Sasol's interest, bringing its overall interest to 70% in the Beetaloo Exploration Permits.

Beetaloo Basin, Northern Territory, Australia

Overview

Falcon Australia is one of the two registered holders of approximately 4.6 million gross acres (~ 18,619 km²), 1.4 million net acres, of three exploration permits in the Beetaloo Basin, Northern Territory, Australia. The Beetaloo Basin is located 600 kilometres south of Darwin, close to infrastructure including a highway, a pipeline and a railway, offering transport options to the Australian market and beyond via the existing and proposed liquified natural gas capacity in Darwin.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

The Beetaloo Basin is a Proterozoic and Cambrian tight oil and gas basin. In its entirety, the Beetaloo Basin covers approximately 8.7 million acres (~ 35,260 km²) and is a relatively underexplored onshore exploration basin. The area is also remote and sparsely populated. Considering all these factors, the Board believes the Beetaloo Basin has shale oil and shale gas potential.

Exploration Permits

A summary of Falcon Australia's Beetaloo Exploration Permits is contained in the table on the previous page.

In accordance with local law and regulations, all of Falcon Australia's acreage interests are subject to combined government and Northern Land Council royalties on production values of up to approximately 12% and 1% (subject to the exercise of Falcon Australia's call option - see "Overriding Royalty Beetaloo Basin exploration permits" for details) to other parties. Falcon Australia is subject to Commonwealth Government corporation tax of 30%, however where the entity has aggregated annual turnover of less than A\$25 million for the financial year Falcon Australia would be considered a 'base rate entity' for Australian tax purposes and would be taxed at a lower rate of 27.5%. Falcon Australia is also subject to the Commonwealth Government's Petroleum Resource Rent Tax ("PRRT") levied at the rate of 40% on taxable profits derived from the petroleum projects. The PRRT is calculated on the individual projects, and royalties are deductible for PRRT purposes. The PRRT tax system is separate from the company income tax system and is based on cash flow. Both royalties and PRRT are deductible for corporate income tax purposes.

Overriding Royalty - Beetaloo Basin exploration permits

On 1 November 2013, it was announced that Falcon Australia had entered an agreement ("CRIAG Agreement") with CR Innovations AG ("CRIAG") to acquire its 4% overriding royalty interest ("ORRI") relating to its exploration permits. On 17 December 2013, it was announced that Falcon Australia had entered an agreement ("TOG Agreement") with Malcolm John Gerrard, Territory Oil & Gas LLC and Tom Dugan Family Partnership LLC ("TOG Group") to acquire 7% (seven eighths) of their 8% private ORRI over the Beetaloo Basin exploration permits. The Group completed the two agreements to acquire 8% of the privately held ORRI at a total cost of \$7 million, of which \$1 million was paid in November 2013 and \$6 million on completion of the farm-out with Origin and Sasol in August 2014. The Group also secured an agreement to acquire a further 3% based on two five year call options granted to Falcon Australia at a future combined cost of \$20 million to Falcon Australia and Origin in proportion to their interest, leaving a 1% royalty in private hands.

Transformational Farm Out of Beetaloo unconventional acreage

On 21 August 2014, Falcon Australia completed its farm-out agreement and joint operating agreement (collectively the "Agreements") with the Farminees, each farming into 35% of Falcon Australia's exploration permits in the Beetaloo Basin, Australia (the "Permits").

The transaction details were:

- Falcon Australia received A\$20 million cash from the Farminees.
- Origin was appointed as operator.
- Farminees to carry Falcon Australia in a nine well exploration and appraisal programme over 2014 to 2018 inclusive, detailed as follows:
 - 3 vertical exploration/stratigraphic wells and core studies;
 - 1 hydraulic fracture stimulated vertical exploration well and core study;
 - 1 hydraulic fracture stimulated horizontal exploration well, commercial study and 3C resource assessment; and
 - 4 hydraulic fracture stimulated horizontal exploration/appraisal wells, micro-seismic and 90 day production tests.
- Drilling/testing specifically planned to take the project towards commerciality. Falcon Australia retained a 30% interest in the Permits.
- Farminees to pay for the full cost of completing the first five wells estimated at A\$64 million, and to fund any cost overruns.
- Farminees to pay the full cost of the following two horizontally fracture stimulated wells, 90 day production tests and micro seismic data collection with a capped expenditure of approximately A\$50 million, any cost overrun funded by each party in proportion to their working interest.
- Farminees to pay the full cost of the final two horizontally fracture stimulated wells and 90 day production tests capped at A\$48 million, any cost overrun funded by each party in proportion to their working interest.
- Farminees may reduce or surrender their interests back to Falcon Australia only after:
 - The drilling of the first five wells; or
 - The drilling and testing of the subsequent two horizontally fracture stimulated wells.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

On **5 May 2017**, it was announced that Origin had acquired Sasol's 35% interest in the Beetaloo joint venture. The transaction did not impact Falcon's 2014 farm-out agreement detailed above, as Origin assumed 100% of the future costs of the farm-out. Sasol departed the Joint Venture to focus its capital investment on its African and North American footprint.

On **16 August 2018**, Falcon announced it had signed an agreement to amend the Farm Out Agreement with Origin to deem Stage 1 of the exploration and appraisal drilling programme in the Beetaloo Sub-basin complete and to commence Stage 2 with a A\$15 million increase to the Stage 2 capped expenditure.

Stage 1 Early Completion

Under the terms of the 2014 Agreements, the joint venture parties ("**JV**") drilled three vertical wells and one hydraulic fracture stimulated horizontal well. The JV agreed that, following the success of the fracture stimulated horizontal well in 2016, accelerating into the Stage 2 horizontal drilling programme is far more beneficial than fracture stimulating the final vertical well under Stage 1. The formal completion of Stage 1 is subject to government approval.

Stage 2 - A\$15 million Cost Cap Increase

With the removal of the fracture stimulation of the vertical well and accelerating the commencement of Stage 2, Origin agreed to increase the Stage 2 expenditure by A\$15 million, to approximately A\$65 million for the exploration and appraisal programme. Any portion of the A\$15 million increase not utilised during Stage 2 will transfer to the Stage 3 capped expenditure, which currently stands at A\$48 million.

Stage 2 Exploration and Appraisal Drilling Program

The JV has agreed to evaluate the potential of the liquid-rich gas fairways in both the Kyalla and Velkerri plays. Exploration and appraisal activities planned for 2019 include the drilling of one vertical well and the drilling and hydraulic fracture stimulation of two horizontal wells. Preparations for this drilling program has started. This will allow for the assessment of three plays, including the Velkerri B dry gas play discovered in 2016, so that the most commercially prospective play can be targeted during Stage 3.

Stage 3 Early Capital Commitments

The Stage 2 exploration and appraisal drilling programme will determine the most commercially prospective play to be targeted during Stage 3. The JV has agreed to the early commitment of Stage 3 capital expenditure during 2019, allowing for an efficient transition from Stage 2 to Stage 3, in the case that Origin and Falcon agree to proceed to Stage 3.

Originally the Group expected the work on the first five wells to be completed in 2016, the next two horizontally fracture stimulated wells to be undertaken in 2017 and the final two horizontally fracture stimulated wells to be undertaken in 2018. The moratorium on hydraulic fracturing has delayed the nine well programme. The DPIR granted a 12-month extension due to the moratorium. In March 2018, the inquiry concluded its work with the publication of a Final Report and on 17 April 2018, the Northern Territory government announced they would be lifting the moratorium on hydraulic fracturing. Resumption of field work with Origin will start as soon as practical, adopting recommendations of the scientific inquiry and obtaining necessary approvals to complete the remaining work programme.

Discoveries and Prospectivity

Work was previously undertaken by a Rio Tinto Group subsidiary company, Sweetpea Petroleum Pty Ltd. ("**Sweetpea**"), Hess Australia (Beetaloo) Pty. Ltd ("**Hess**") and Falcon Australia. Sweetpea drilled the Shenandoah-1 vertical well, which was deepened by Falcon Australia. Hess acquired 3,490 kilometres of 2D seismic data. The seismic database, along with existing well data, provided a solid platform to extrapolate a detailed structural and stratigraphic model for the Beetaloo Basin, concluding the Beetaloo Basin is an active petroleum system.

2015 saw the commencement of the work programme with the drilling of three wells, Kalala S-1 to a total depth ("**TD**") of 2,619 metres, Amungee NW-1 to a TD of 2,611 metres and the first horizontal well, Amungee NW-1H to a TD of 3,808 metres, including a 1,100 metre horizontal section. In 2016, the Beetaloo W-1 well was drilled to a TD of 3,173 metres and the horizontal Amungee NW-1H well was hydraulic stimulated.

On 12 October 2016, Falcon announced that Origin had submitted a Notification of Discovery to the DPIR on the Amungee NW-1H well in the Beetaloo Basin and on **15 February 2017** it was announced that Origin had submitted the Results of Evaluation of the Discovery and Preliminary Estimate of Petroleum in Place for the Amungee NW-1H Velkerri B Shale Gas Pool ("**Discovery Evaluation Report**") to the Northern Territory Government.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

The submission followed the completion of extended production testing at the Amungee NW-1H exploration well of the "B Shale" member of the Middle Velkerri formation.

In addition, Origin undertook a resource study based on the Amungee NW-1H well results and other key wells in the Beetaloo Basin including regional seismic data to determine a best estimate ("2C") contingent gas resource estimate for the Middle Velkerri B Shale Pool within EP76, EP98 and EP117.

Key Details of the Discovery Evaluation Report

The Discovery Evaluation Report was submitted in compliance with Section 64 of the Northern Territory Petroleum Act (2016) and as per the Reporting a Petroleum Discovery Guideline. It followed the initial submission of the Notification of Discovery in October 2016. The Report provides the following volumetric estimates and recovery / utilisation factors for the B Shale member of the Middle Velkerri formation within permits EP76, EP98, and EP117.

Middle Velkerri B Shale Volumetric Estimates as of 15 February 2017 ⁽¹⁾		
	Gross	Net Attributable ⁽²⁾
	Best Estimate	Best Estimate
Area km ² ⁽³⁾	16,145	4,751
Original Gas In Place ("OGIP") (TCF) ⁽⁴⁾	496	146
Combined Recovery / Utilisation Factor ⁽⁵⁾	16%	16%
Technically Recoverable Resource (TCF)	85	25
OGIP Concentration (BCF/km ²) ⁽⁶⁾	31	31
¹ The Report and estimates included in the table above were not prepared in accordance with the Canadian Oil and Gas Evaluation Handbook ("COGEH") ² Falcon's working interest is 29.43%, net attributable numbers do not incorporate royalties over the permits ³ Area defined by a depth range at a maturity cut-off consistent with the dry gas window within the Beetaloo JV Permits (EP79, EP98, EP117) ⁴ Trillion cubic feet ⁵ The combined recovery/utilization factor range was applied stochastically to the OGIP range to calculate the range of technically recoverable resource within the Beetaloo JV permits. ⁶ Billion cubic feet per square kilometre		

Understanding the factors controlling deliverability and recovery as well as spatial variation within the gas play/shale pool are in their infancy. A quantitative assessment of the aggregated estimated recoverable resource of the gas play that can handle these complexities will require a statistically significant number of wells testing the gas play. As there is only a single production test within the gas play Origin decided upon a qualitative assessment approach instead to estimate the technically recoverable resource. There is no certainty that any portion of the resources will be discovered. If discovered, there is no certainty that it will be commercially viable to produce any portion of the resources.

Factors considered in the qualitative assessment of technically recoverable hydrocarbon resource in the gas play were the stimulated rock volume recovery factor range, the subsurface utilization factor range and surface utilization factor range.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

Origin's Contingent Gas Resource Estimates for the Middle Velkerri B Shale Pool within EP76, EP98 and EP117
Origin also prepared a contingent resource estimate using probabilistic methods and reservoir evaluation data, in addition to regional seismic data.

Assessment of 2C Contingent Gas Resource Estimates for the Middle Velkerri B Shale Pool within EP76, EP98 and EP117 as of 15 February, 2017¹		
Measured and Estimated Parameters	Units	Best Estimate
Area ²	km ²	1,968
OGIP ³	TCF	61.0
Gross Contingent Resource⁴	TCF	6.6
Net Contingent Resource^{4,5}	TCF	1.98
¹ Contingent resource estimates were prepared on a statistical aggregation basis and in accordance with the Society of Petroleum Engineers Petroleum Resources Management System ("SPE-PRMS"). SPE-PRMS was developed by an international group of reserves evaluation experts and endorsed by the World Petroleum Council, the American Association of Petroleum Geologists, the Society of Petroleum Evaluation Engineers, and the Society of Exploration Geophysicists. Contingent resource estimates are those quantities of gas (produced gas minus carbon dioxide and inert gasses) that are potentially recoverable from known accumulations but which are not yet considered commercially recoverable due to the need for additional delineation drilling, further validation of deliverability and original gas in place, and confirmation of prices and development costs. If the estimates were to be prepared in accordance with COGEH, Falcon is highly confident that there would be no change to the contingent resource estimates above. ² P50 area from the Contingent Resource area distribution ³ OGIP presented is the product of the P50 Area by the P50 OGIP per km ² ⁴ Estimated gas contingent resource category of 2C. There is no certainty that it will be commercially viable to produce any portion of the resources ⁵ Net to Falcon's 29.43% working interest in EP76, EP98, and EP117, the net contingent resource number does not incorporate royalties over the permits		

As noted in Origin's press release the "*The contingent resource estimates contained in [their] report are based on, and fairly represents, information and supporting documentation that have been prepared by Alexander Côté who is a full-time Origin employee and a Qualified Reserves and Resource Evaluator. Mr Côté is a registered professional engineer with specialised unconventional gas resource characterisation and development experience. Mr Côté has consented to the form and context in which these statements appear.*" Mr Côté is a member of the Association of Professional Engineers and Geoscientists of Alberta.

[This part of the page was left blank intentionally]

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

Further information relating to the disclosure of the contingent gas resource estimates

Well Name	Amungee NW-1H
Permit / location	EP98 (onshore Beetaloo Basin Northern Territory, Australia)
Working interest in well	Falcon 29.43%
Product type	Shale gas
Geological rock type of formation drilled	Organic rich shale (mudstone and siltstone)
Depth of zones tested	~2170-2190 metres below sea level
Type of test	Production test following hydraulic fracture stimulation
Hydrocarbon phases recovered	Gas (Approximate composition: methane ~92%, ethane+ ~3%, carbon dioxide and inerts ~5%)
Flow rates and volumes	Average rate (57 days): 1.1 MMscf/d, Final production rate: 1.07 MMscf/d, Cumulative production: 63 MMscf
Number of fracture stimulation stages	11 stages (average size ~ 100 ton per stage)
Risks and level of uncertainty with recovery of resources	<p>Risks and uncertainties include the lifting of the Northern Territory moratorium on hydraulic fracture stimulation, completing longer-duration production testing above the 57 days conducted on Amungee NW-1H, reducing well costs with scale of activity, establishing gas sales agreements and building infrastructure to connect the resource to market.</p> <p>Contingent on the moratorium being lifted, additional appraisal drilling is planned (as per the work program associated with the permits), along with hydraulic fracture stimulation and testing to assess deliverability and move the project towards commercialisation.</p>
Significant positive and negative factors relevant to the estimate	<p>Significant positive factors relevant to the estimate of the contingent resources include the successful well test at Amungee NW-1H which produced enough gas to surface to be of commercial interest; core and log data from Amungee NW-1H, Beetaloo W-1, Kalala S-1, Tanumbirini-1, McManus-1, Atree-2 and Walton-2 provide convincing evidence of a significant volume of moveable hydrocarbons; and the Marcellus Shale (Pa., USA) and Barnett Shale (Tx., USA) are analogous, commercially-productive fields that are similar to the Velkerri B Shale reservoir.</p> <p>Significant negative factors include the lifting of the Northern Territory moratorium on hydraulic fracture stimulation, the limited number of wells on the Company's acreage, lack of a developed service sector providing uncertainty regarding estimates of capital and operating costs, developing hydrocarbon regulations and environmental legislation and the requirement to obtain social acceptability for oil and gas operations.</p>
Commerciality	<p>Currently this project is based on a conceptual study. The economic status is undetermined at this time. The contingent resources will continue to be assessed as additional appraisal wells are drilled and tested in order to better evaluate the commercial potential of the play. After a sufficient number of wells have been drilled to demonstrate that the project is technically feasible and a development plan has been generated, economics can be run to determine commerciality of production.</p>

Current Activity

On **21 February 2018**, Falcon announced that Origin had presented a technical paper on the potential of the Kyalla formation in the Beetaloo Sub-basin at the Australia Exploration Geoscience Conference (AEGC) in Sydney. The key conclusions by Origin were the following:

- Reservoir and geomechanical analysis acquired at the Beetaloo W-1 well indicate the presence of two potential Source Rock Reservoir (“SRR”) intervals; the middle Kyalla SRR and the lower Kyalla SRR.
- Geomechanical properties of the lower Kyalla SRR suggest it has the greater potential and could be conducive to successful hydraulic fracture stimulation.
- Development of the lower Kyalla SRR, if viable, could have significant cost advantages over that of the middle Velkerri SRR due to expected lower drilling costs.
- Mudgas and core analysis indicate the reservoir is likely to be wet gas which could also improve the economics considerably.
- There is also the possibility that a successful lower Kyalla SRR test could lead to a ‘stacked’ play development with the middle Velkerri SRR. Infrastructure sharing synergies, with a greater portion of centralised infrastructure, could result in significant cost savings and an optimised surface footprint.
- Further appraisal work is required to determine the deliverability of the identified Kyalla SRRs.

On **15 May 2018** Origin presented a technical paper, headlined - “Australia’s premier shale basin: 5 plays 1,000,000,000 years in the making”, at the Australian Petroleum Production and Exploration Association (“APPEA”) Conference. The key findings are summarised as follows:

Overall

Origin has identified four additional potential plays in the Beetaloo sub-basin in addition to the existing and explored Velkerri shale dry gas play, namely;

- Velkerri shale liquids rich gas play,
- Kyalla shale and hybrid liquids rich gas plays, and
- Hayfield sandstone oil/condensate play.

The Velkerri shale dry gas remains the most materially and technically mature resource. Origin stated, “as such, the Beetaloo provides the JV with a diversified portfolio of material multi-TCF plays, each with the potential to redefine Australia’s energy market.”

Velkerri shale liquids rich gas play

- Located along the northern and south-eastern flanks of the Beetaloo sub-basin.
- Indications that porosity and permeability are higher in these areas.
- Gas composition and maturity modelling indicate a possible condensate to gas ratio (“CGR”) in the region of 5-40 bbl/MMscf.
- A horizontal fracture stimulated well to test the deliverability of the play is required to assess technical viability.

Kyalla shale and hybrid lithology liquids rich gas play

- Two related liquid rich gas play types have been identified for further appraisal:
 - shale play targets, and
 - hybrid play targets.
- Prospective areas are interpreted to be confined to the JV’s permits.
- There is likely a cost advantage over the Velkerri shale dry gas play as it is shallower.
- Liquid yields could be in the range of 15-60 bbl/MMscf.
- Additional work is required to rank these plays for further appraisal.

Hayfield sandstone oil/condensate play

- Interpreted as a thin but regionally extensive sandstone confined to the north of the JV permits.
- Strong wet gas shows in the Amungee NW-1 and other regional wells suggest the presence of liquid hydrocarbons without significant formation water.
- The Hayfield Sandstone is a tight sandstone with a significant secondary porosity network (but low matrix permeability) and potentially the presence of open, uncemented, hydrocarbon filled natural fractures.
- Anticipated to have the highest liquid yields and lowest well costs that could contribute to improved economics of a stacked play development.
- Success will be dependent on the combination of system permeability and resource density.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

- Would require a horizontal fracture stimulated well to assess the technical viability of the play.

Northern Territory Government Moratorium

On **14 September 2016**, Chief Minister Michael Gunner of the Northern Territory introduced a moratorium on hydraulic fracturing in the Northern Territory and a scientific inquiry into hydraulic fracturing was duly established.

On **27 March 2018**, Falcon noted the publication of the Final Report by the scientific inquiry into hydraulic fracturing.

Justice Rachel Pepper noted in Community Update #31 that the overall conclusion is that risk is inherent for the onshore shale gas industry, however if all of the recommendations are implemented, the identified risks associated with any onshore shale gas industry can be mitigated or reduced to an acceptable level, and in some cases, the risks can be eliminated.

Summary of Final Report

The summary of the Final Report provided the following conclusion:

"No industry is completely without risk, and the development of any onshore shale gas industry in the NT [Northern Territory] is no exception. But having considered the latest and best-available scientific data from a wide range of sources, and noting the recent and continuing technological improvements in the extraction of onshore shale gas, the conclusion of this Inquiry is that the challenges and risks associated with any onshore shale gas industry in the NT can be appropriately managed by, among other things:

- *releasing land that is environmentally, socially and culturally appropriate for use for shale gas development;*
- *mandating world-leading engineering standards for the construction, maintenance and de-commissioning of all onshore shale gas wells and for the extraction of shale gas by hydraulic fracturing;*
- *implementing new technologies where relevant as soon as they become available;*
- *requiring the comprehensive monitoring and reporting of all aspects of onshore shale gas operations with real-time public scrutiny of the resulting data;*
- *implementing area (regional) based approval processes;*
- *the completion of a SREBA [strategic regional environmental and baseline assessment] before production to gather essential baseline data prior to any onshore shale gas industry being developed;*
- *insisting on a standalone comprehensive SIA [social impact assessment] for each onshore shale gas project;*
- *ensuring that traditional Aboriginal owners and Aboriginal communities are properly and comprehensively consulted about all aspects (positive and negative) of any onshore shale gas project on or affecting their country;*
- *ensuring that the regulator is truly independent and that laws protecting the environment are properly enforced with sufficiently stringent sanctions for non-compliance;*
- *ensuring greater access to justice;*
- *reforming the current regulatory framework governing onshore shale gas development in the NT to strengthen transparency and accountability of all decision-making;*
- *introducing full fee recovery to fund the necessary regulatory reforms and to ensure that strong oversight is maintained; and*
- *ensuring that all of the recommendations contained in this Report are implemented in full.*

Of course, nothing is guaranteed. And with any new industry, it is not uncommon for problems to emerge. However, it is the Panel's opinion that, provided that all of the recommendations made in this Report are adopted and implemented in their entirety, not only should the risks associated with an onshore shale gas industry be minimised to an acceptable level, in some instances, they can be avoided altogether."

On **17 April 2018** Falcon welcomed the decision by the Northern Territory ("**NT**") government to lift the moratorium on hydraulic fracturing. Resumption of field work with Origin will start as soon as practical, adopting recommendations of the scientific inquiry and obtaining necessary approvals to complete the remaining work programme.

On **16 August 2018**, Falcon announced it had signed an agreement to amend the Farm Out Agreement with Origin to deem Stage 1 of the exploration and appraisal drilling programme in the Beetaloo Sub-basin complete and to commence Stage 2 with a A\$15 million increase to the Stage 2 Cost Cap. Full details are on page 8.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

Karoo Basin, South Africa

Overview

The Company holds a TCP covering an area of approximately 7.5 million acres (~ 30,327 km²), in the southwest Karoo Basin, South Africa. The TCP granted Falcon exclusive rights to apply for an exploration right over the underlying acreage, which they duly did in August 2010, submitting an application to the Petroleum Agency of South Africa ("PASA"). The Company also submitted an environmental management plan in January 2011 which was updated at the request of the PASA and submitted on 27 February 2015.

Technical Regulations

Regulations for Petroleum Exploration and Production

On 3 June 2015, the Minister of Mineral Resources (the "**Minister**") published the Regulations for Petroleum Exploration and Production, which prescribe various technical and environmental standards for onshore hydraulic fracturing. The promulgation of the regulations means exploration companies can conduct hydraulic fracturing if all necessary statutory approvals are in place.

On 18 October 2017, the Eastern Cape High Court held that the Minister lacked the authority to promulgate the Regulations for Petroleum Exploration and Production. The Minister indicated they would review the outcome of the High Court ruling and would decide on how to proceed. He also signaled South Africa remained committed to a shale gas industry and licenses could be issued in 2019.

Strategic Environmental Assessment ("SEA")

In May 2015, the South African government formally launched a 24-month SEA of shale gas mining in the Karoo, in an effort to understand the potential social, economic and environmental risks and opportunities of exploiting probable, but as yet unexplored, unconventional gas resources in the water-stressed territory. This SEA does not prevent exploration companies from conducting parallel exploration activities within this timeframe.

The scope of the SEA covers biodiversity and ecosystem services; water resources, including surface and groundwater; geophysics; economics, including the impact on agriculture and tourism; spatial planning; national energy planning; waste management; human health impacts; air quality; the impact on the social fabric; visual and noise impacts; heritage resources and the possible impact on the area's 'sense of place'.

Fiscal Terms

The Mineral and Petroleum Resources Development Act, 28 of 2002 empowers the Minister of Mineral Resources, when granting an exploration right, to direct the applicant to sell an interest to a Historically Disadvantaged South African ("**HDSA**"). The amount of the interest is, derived from the Liquid Fuels Charter, a policy instrument governing participation by HDSAs in the petroleum industry. It is a statutory condition for the grant of a production right that an HDSA holds a 10% interest in the operation. How HDSAs earn or pay for the 10% interest is not legislated, meaning applicants are free to negotiate terms with prospective HDSAs subject to the "unofficial approval" of the PASA.

State participation in exploration and production rights are not addressed in legislation. The practice has been for exploration rights to incorporate a clause giving the State an option to acquire an interest of up to 10% in any production right granted through the national oil company. The State is not required to pay any consideration for its interest or contribute to past costs but must contribute pro rata to its interest towards production costs going forward. On 12 March 2014, South Africa's parliament approved the Mineral and Petroleum Resources Development Amendment Bill ("**MPRDA Bill**") amending the Mineral and Petroleum Resources Development Act (28 of 2002). Among the proposed changes, it provides the state with a free carried interest of 20% in all new gas and oil exploration and production ventures. In addition, it introduced a new clause entitling it to further participation in the form of an acquisition at an agreed price or production sharing agreements with no percentage limit on this entitlement stated in the amendments. In Q2 2014, the then Minister requested the President of South Africa to delay the signing of the MPRDA Bill to investigate the matter further. The President of South Africa referred the MPRDA Bill back to the National Assembly for reconsideration in January 2015. On 4 November 2016 an updated MPRDA Bill was presented to a select committee of Parliament by the Department of Mineral Resources. Provincial meetings and public hearings relating to the updated MPRDA Bill commenced on 16 December 2016 and are ongoing.

Corporation tax in South Africa is imposed at a rate of 28% of taxable income. Dividends tax is imposed on the shareholder at a rate of 20%, but it may be reduced to 5% in terms of a Double Tax Agreement (if applicable), or to 0% in respect of dividends paid by an oil and gas company out of amounts attributable to its oil and gas income. The 20% rate is effective from 22 February 2017, prior to this date the rate of dividend tax was 15%.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

The South African Government is entitled to a royalty on the sale of mineral resources of up to 7% of gross sales for unrefined resources and 5% of gross sales for refined resources, such as oil and gas.

Discoveries and Prospectivity

The overall Karoo Basin is approximately 173 million acres (~ 700,000 km²), located in central and southern South Africa, containing thick, organic rich shales such as the Permian Whitehill formation. The Karoo describes a geological period lasting some 120 million years, covering the late Paleozoic to early Mesozoic interval periods. Rocks were deposited in a large regional basin, resulting in the build-up of extensive deposits. Until recently, the Karoo Basin was not considered prospective for commercial hydrocarbons resulting, however in an independent report dated June 2013, the U.S. Energy Information Administration (“**EIA**”) estimated there are 390 trillion cubic feet (“**Tcf**”) of technically recoverable resources, ranking it fifth in the world after China, USA, Argentina and Mexico for shale gas potential. The Permian Ecca group contains three potential shales identified as having potential for shale gas, with the Whitehill Formation, in particular, considered ubiquitous, having a high organic content and deemed thermally mature for gas.

Cooperation agreement

In December 2012, Falcon entered a cooperation agreement with Chevron Business Development South Africa Limited (“**Chevron**”) to jointly seek unconventional exploration opportunities and obtain exploration rights in the Karoo Basin over a period of five years, subject to the parties mutually agreeing participation terms applicable to each right. As part of the agreement, Chevron made a cash payment to Falcon of \$1 million in February 2013, as a contribution to past costs. The cooperation agreement terminated in December 2017 at the end of the five-year exclusivity period.

Current activity

There have been no further updates since the PASA confirmed in Q1 2016 that it expected to finalise a recommendation to the Minister on Falcon's application for an exploration licence.

As noted under the Technical Regulations heading above, in October 2017, the Eastern Cape High Court held that the Minister lacked the authority to promulgate the Regulations for Petroleum Exploration and Production. The Minister indicated they would review the outcome of the High Court ruling and would decide on how to proceed. He also signaled South Africa remained committed to a shale gas industry and licenses could be issued in 2019.

The Board now expects that the exploration right over the acreage will be awarded in 2019.

[This part of the page was left blank intentionally]

Makó Trough, Hungary

Overview

Falcon has been active in the Makó Trough since 2005 when it acquired two exploration licences, the Makó and the Tisza exploration licences. In 2007, Falcon's subsidiary, TXM, was awarded the 35-year Makó Production Licence which covers some of the acreage originally covered by the Makó and the Tisza exploration licences.

Makó Production Licence

The Makó Production Licence was granted by the Hungarian Mining Authority over a gas exploration project in the Makó Trough, covering approximately 245,775 acres (~ 1,000 km²), located in south-eastern Hungary. It is located approximately ten kilometres to the east of the largest producing field in Hungary, the Algyő field, owned and operated by the MOL Group. The area is transected by existing gas pipelines and infrastructure, including a 12 kilometre gas pipeline built by Falcon, offering transport and potential access to local markets and larger distribution centres for international markets.

Under the terms of the licence, the Group is obliged to pay a 2% royalty to the Hungarian Government on any unconventional production and has a further 5% royalty payable to Prospect Resources Inc., the previous owners of the acreage.

Up to 31 December 2017 corporate profits were taxed at 19% on the part of the tax base which exceeded HUF500 million (approximately \$1.8 million); below that level a reduced rate of 10% applied. From 1 January 2017, corporate income tax was reduced to a single rate of 9%, which is applicable to all levels of net income. 2009 saw the introduction of an additional profit based energy industry tax which is levied on energy supplying companies. The rate is 31%, with deductions allowable for certain capital expenditures. TXM is the operator and there are no outstanding work commitments on the Makó Production Licence.

Discoveries and Prospectivity

The Makó Trough contains two plays:

- the shallower Algyő Play at depths between 2,300 metres and 3,500 metres; and
- a deeper unconventional play targeting significant contingent resources in the Deep Makó Trough.

The Algyő Play

The Algyő Play is a relatively shallow play between 2,300 and 3,500 metres deep. While wells have been drilled through the Algyő Play and encountered gas shows, none tested the shallow play at an optimal location, as they targeted the Deep Makó Trough. Multiple Algyő prospects have been identified by the Group through extensive amplitude versus offset analysis, and 3D seismic data showed the presence of possible gas zones above the Szolnok formation (part of the Deep Makó Trough).

In January 2013, Falcon agreed to a three-well drilling exploration programme with Naftna industrija Srbije jsc ("**NIS**"), 56% owned by Gazprom Group, to target the Algyő Play, with NIS making a cash payment of \$1.5 million to Falcon.

Only two of the three wells were drilled. Kút völgy-1 reached TD of 3,305 metres, with the well penetrating an alternating sequence of sandstones, siltstones and shales over a gross interval of 320 metres to TD, with gas shows throughout. Two conventional cores were taken and extensive wireline logs were run. Testing indicated that the well experienced improved recovery from certain intervals however well production did not meet commercial rates and the well was plugged and abandoned.

Well testing on Besa-D-1, the second well, were completed in November 2014. The testing of two sand intervals, both part of the tight turbiditic sequence in the lower Algyő Formation, indicated well production did not meet commercial rates and the well was plugged and abandoned. In December 2015, Falcon signed a termination agreement with NIS, with NIS paying \$3.7 million to Falcon in fulfilment of its contractual obligations. Falcon retains a 100% interest in the Algyő Play.

The Deep Makó Trough

This is a deeper unconventional play targeting gas, and to a lesser extent oil, in the low permeability and low porosity rocks in the deeper horizons of the basin.

Between 2005 and 2007, Falcon acquired 1,100 km² of 3D seismic data and executed a six-well drilling programme on the Deep Makó Trough. Each of the six wells encountered thick sequences of hydrocarbon bearing rocks, and tests flowed hydrocarbons from each tested horizon. Several wells flowed gas on test and one well, Magyarcsanád-1,

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

tested light oil. The Makó-7 results demonstrated the presence of a very large column of hydrocarbons in the well-bore.

Current activity

Falcon has previously indicated it continues to review its operations in Hungary, evaluating all options available to the Group to deliver shareholder value. The Group maintains its 100% interest in the Máko Trough.

Alberta, Canada

For the period ended 30 June 2018, Falcon earned \$3,000 (2017: \$5,000) in revenue from its Alberta, non-operating working interests (the "**Hackett Interest**"). Falcon's Alberta interests are in three producing and one shut-in, natural gas wells. Falcon does not anticipate further exploration or development of these wells, nor are further material revenue and costs expected.

[This part of the page was left blank intentionally]

RESULTS OF OPERATIONS

This review of the results of operations should be read in conjunction with the unaudited unreviewed interim condensed consolidated financial statements for the three and six months ended 30 June 2018 and 2017 and, the audited consolidated financial statements for the year ended 31 December 2017 and 2016.

Management's Discussion and Analysis of financial condition and results of operations for the three months ended 30 June 2018 as compared to the three months ended 30 June 2017

The Company reported a net loss of \$0.5 million for the three months ended 30 June 2018 as compared to a net loss of \$0.3 million for the three months ended 30 June 2017. Changes between 2018 and 2017 were as follows:

	Three months ended 30 June		Changes	
	2018 \$'000	2017 \$'000	\$'000	%
Revenue				
Oil and natural gas revenue	2	2	0	0%
Expenses				
Exploration and evaluation expenses	(38)	(58)	20	-34%
Production and operating expenses	(5)	(3)	(2)	67%
Depreciation	(1)	(1)	-	0%
General and administrative expenses	(497)	(484)	(13)	3%
Share based compensation	(22)	(130)	108	-83%
Foreign exchange (loss) / gain	(134)	142	(276)	-194%
	(697)	(534)	(163)	31%
Results from operating activities	(695)	(532)	(163)	31%
Fair value gain – outstanding warrant	283	266	17	6%
Finance expense

Non-controlling interest	-	-	-	-
Loss and comprehensive loss	(494)	(266)	(228)	86%

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

Oil and natural gas revenue

Oil and natural gas revenue of \$2,000 (2017: \$2,000) consists of the sale of natural gas from the Hackett Interest in Alberta, Canada. The Company has not yet realised significant revenue from its planned operations elsewhere.

Exploration and evaluation expenses

	Three months ended 30 June		Change	
	2018 \$'000	2017 \$'000	\$'000	%
Consulting, legal and other associated costs	(15)	(21)	6	-29%
Well related costs	(23)	(37)	14	-38%
	(38)	(58)	20	-34%

Exploration and evaluation expenses represent recurring maintenance and landowner costs in maintaining and safeguarding the Company's Hungarian wells along with exploration costs associated with the Company's TCP in South Africa. The decrease in costs quarter on quarter is primarily attributable to a reduction in maintenance work and employee costs in Hungary and the non-recurrence of costs associated with the Company's TCP in 2018.

Depreciation

The depreciation expense for the three months ended 30 June 2018 and 30 June 2017 consists of depreciating assets and equipment at the Group's Dublin office.

General and administrative expenses

	Three months ended 30 June		Change	
	2018 \$'000	2017 \$'000	\$'000	%
Accounting and audit fees	(38)	(26)	(12)	46%
Consulting fees	(13)	(18)	5	-28%
Legal fees	(9)	(6)	(3)	50%
Investor relations	(51)	(25)	(26)	104%
Office and administrative costs	(68)	(55)	(13)	24%
Payroll and related costs	(225)	(262)	37	-14%
Directors' fees	(51)	(60)	9	-15%
Travel and promotion	(42)	(32)	(10)	31%
	(497)	(484)	(13)	3%

General and administrative expenses increased by \$0.01 million to \$0.49 million in 2018 from \$0.48 million in 2017. The main changes were as follows:

- Accounting and audit fees: Costs remain relatively consistent period on period. The movement is attributed to the release of an accrual in 2017, with no similar release in 2018, this coupled with a small increase for advisory work contributed to the movement period on period.
- Consulting and legal fees: The overall decrease is due to the on-going focus on cost containment by management during the period.
- Investor relations: One of the main focuses of the Group's management is to actively engage with its shareholders and investors. The increase for the three months ended 30 June 2018 in comparison with same period in 2017 relates to the appointment of RBC Capital Markets as joint broker of Falcon.
- Office and administrative expenses have increased in the period due to increased filing fees with the relevant stock exchanges. Filing fees are driven by the Group's share price which had favourable movements in 2017 due to the positive news on the Group's Australian exploration asset, leading to increases for 2018 filing fees.
- Travel and promotion increased in the current three-month period in comparison with the comparative three months to June 2017. Certain levels of travel and promotion costs are due to the international geography of the Group's assets and investor base.

Share based compensation

Share based compensation expense decreased in the three months ended 30 June 2018 compared to the same three months in 2017. In February 2017, 6 million options were granted, one third of which vested immediately with

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

an additional one third vesting on each subsequent anniversary until they are fully vested in February 2019. There was no similar grant in 2018. The current period expense relates to options granted in previous years.

Foreign exchange (loss) / gain

The foreign exchange loss recorded in operating expenses for the three months ended 30 June 2018 is attributed to unfavorable movements to the US Dollar since 31 March 2018. There were favorable movements in to the US Dollar in the same three-month period in 2017.

Fair value gain – outstanding warrant

There is an increase on the fair value gain of the outstanding warrant from the three months ended 30 June 2017 to the three months ended 30 June 2018. The primary factor associated with this valuation was Falcon's share price (as quoted on the TSX-V), which moved from CDN43.0 cents at 31 March 2017 to CDN38.5 cents at 30 June 2017. For the same three months in 2018, Falcon's share price decreased from CDN33.5 cents at 31 March 2018 to CDN31.5 cents at 30 June 2018, resulting in a movement in the gain period on period.

Finance expense

The overall movement in finance expenses period on period is related to unfavorable movements to the US Dollar since 31 March 2018, compared to favourable movements in the same 3 months ended 30 June 2017.

Loss attributable to non-controlling interest

The amounts reflected in 2018 and 2017 represent Falcon Australia's losses attributable to shareholders other than Falcon.

Cash flow

	Three months ended 30 June	
	2018	2017
	\$'000	\$'000
Net cash used in operating activities	(745)	(541)
Net cash generated from financing activities	57	81
Net cash generated by / (used in) investing activities	499	(3,778)
Change in cash and cash equivalents	(189)	(4,238)
Effect of exchange rates on cash & cash equivalents	(44)	36
Cash and cash equivalents at beginning of period	5,455	6,600
Cash and cash equivalents at end of period	5,222	2,398
Cash on deposit – maturity greater than three months	2,500	7,277
	7,722	9,675

Cash and cash equivalents have increased by \$2.8 million to \$5.2 million in 2018 from \$2.4 million in 2017. The main changes were as follows:

- Net cash used in operating activities: The increase is due to payroll related costs, investor related costs and filing fees.
- Net cash generated from financing activities: This relates to the exercise of stock options in the period.
- Net cash generated by / (used in) investing activities: The 2018 movement is due primarily to cash coming off deposit that had a maturity greater than three months before the period end date.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

RESULTS OF OPERATIONS

This review of the results of operations should be read in conjunction with the unaudited unreviewed interim condensed consolidated financial statements for the three and six months ended 30 June 2018 and 2017 and, the audited consolidated financial statements for the year ended 31 December 2017 and 2016.

Management's Discussion and Analysis of financial condition and results of operations for the six months ended 30 June 2018 as compared to the six months ended 30 June 2017

The Company reported a net loss of \$1.1 million for the six months ended 30 June 2018 as compared to a net loss of \$3.2 million for the six months ended 30 June 2017. Changes between 2018 and 2017 were as follows:

	Six months ended 30 June		Changes	
	2018 \$'000	2017 \$'000	\$'000	%
Revenue				
Oil and natural gas revenue	3	5	(2)	-40%
Expenses				
Exploration and evaluation expenses	(79)	(125)	46	-37%
Production and operating expenses	(9)	(6)	(3)	50%
Depreciation	(1)	(2)	1	-50%

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

Oil and natural gas revenue

Oil and natural gas revenue of \$3,000 (2017: \$5,000) consists of the sale of natural gas from the Hackett Interest in Alberta, Canada. The Company has not yet realised significant revenue from its planned operations elsewhere.

Exploration and evaluation expenses

	Six months ended 30 June		Change	
	2018 \$'000	2017 \$'000	\$'000	%
Consulting, legal and other associated costs	(25)	(61)	36	-59%
Well related costs	(54)	(64)	10	-16%
	(79)	(125)	46	-37%

Exploration and evaluation expenses represent recurring maintenance and landowner costs in maintaining and safeguarding the Company's Hungarian wells along with exploration costs associated with the Company's TCP in South Africa. The decrease in costs period on period is primarily attributable to a reduction in maintenance work and employee costs in Hungary and the non-recurrence of costs associated with the Company's TCP in 2018.

Depreciation

The depreciation expense for the six months ended 30 June 2018 and 30 June 2017 consists of depreciating assets and equipment at the Group's Dublin office.

General and administrative expenses

	Six months ended 30 June		Change	
	2018 \$'000	2017 \$'000	\$'000	%
Accounting and audit fees	(74)	(55)	(19)	35%
Consulting fees	(26)	(35)	9	-26%
Legal fees	(11)	(10)	(1)	10%
Investor relations	(100)	(46)	(54)	117%
Office and administrative costs	(135)	(114)	(21)	18%
Payroll and related costs	(498)	(533)	35	-7%
Directors' fees	(102)	(120)	18	-15%
Travel and promotion	(55)	(48)	(7)	15%
	(1,001)	(961)	(40)	4%

General and administrative expenses increased by \$0.04 million to \$1.0 million in 2018 from \$0.96 million in 2017. The main changes were as follows:

- Accounting and audit fees: The movement is attributed to the release of an once off accrual in 2017 which was not required, there was no similar release in 2018, this coupled with a small increase for advisory work contributed to the movement period on period.
- Consulting and legal fees: The overall decrease is due to the on-going focus on cost containment by management during the period.
- Investor relations: One of the main focuses of the Group's management is to actively engage with its shareholders and investors. The increase for the six months ended 30 June 2018 in comparison with same period in 2017 relates to the appointment of RBC Capital Markets as joint broker of Falcon.
- Office and administrative expenses have increased in the period due to increased filing fees with the relevant stock exchanges. Filing fees are driven by the Group's share price which had favourable movements in 2017 due to the positive news on the Group's Australian exploration asset, leading to increases for the 2018 filing fees.
- Travel and promotion increased in the six months to 30 June 2018 in comparison with the comparative six months to June 2017. Certain levels of travel and promotion costs are due to the international geography of the Group's assets and investor base.

Share based compensation

Share based compensation expense decreased in the six months ended 30 June 2018 compared to the same six months in 2017. In February 2017, 6 million options were granted, one third of which vested immediately with an

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

additional one third vesting on each subsequent anniversary until they are fully vested in February 2019. There was no similar grant in 2018. The current period expense relates to options granted in previous years.

Foreign exchange (loss) / gain

The foreign exchange loss recorded in operating expenses for the six months ended 30 June 2018 and the same period in 2017 is attributed to unfavorable movements to the US Dollar since 31 December 2017. There were favourable movements in the six month period from 31 December 2016 to 30 June 2017.

Fair value gain / (loss) – outstanding warrant

There was a fair value gain for the six months ended 30 June 2018 relative to a loss for the same period in 2017. The primary factor associated with the 2017 valuation was Falcon's share price (as quoted on the TSX-V), which moved from CDN9.0 cents at 31 December 2016 to CDN38.5 cents at 30 June 2017. For the similar six months in 2018, while Falcon's share price remained constant at CDN31.5 cents at 31 December 2017 and 30 June 2018, movement was driven by the reduction in the expected life given it's an additional six months closer to the maturity of the warrant and the volatility factor used in the calculation also contributed to the fair value gain for the 6 months ended 30 June 2018.

Finance expense

The overall movement in finance expenses period on period is driven by unfavourable movements to the US Dollar.

Loss attributable to non-controlling interest

The amounts reflected in 2018 and 2017 represent Falcon Australia's losses attributable to shareholders other than Falcon.

Cash flow

	Six months ended 30 June	
	2018	2017
	\$'000	\$'000
Net cash used in operating activities	(1,290)	(1,067)
Net cash generated from financing activities	57	539
Net cash generated by / (used in) investing activities	3,533	(2,974)
Change in cash and cash equivalents	2,300	(3,502)
Effect of exchange rates on cash & cash equivalents	(45)	43
Cash and cash equivalents at beginning of period	2,967	5,857
Cash and cash equivalents at end of period	5,222	2,398
Cash on deposit – maturity greater than three months	2,500	7,277
	7,722	9,675

Cash and cash equivalents have increased by \$2.8 million to \$5.2 million in 2018 from \$2.4 million in 2017. The main changes were as follows:

- Net cash used in operating activities: The increase is due to payroll related costs, investor related costs and filing fees.
- Net cash generated from financing activities: This relates to the exercise of stock options in the period.
- Net cash generated by / (used in) investing activities: The 2018 movement is due primarily to cash coming off deposit that had a maturity greater than three months before the period end date.

Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

SUMMARY OF QUARTERLY RESULTS

The following is a summary of the eight most recently completed quarters:

(In thousands of \$ unless otherwise stated)

As of:	30 September 2017	31 December 2017	31 March 2018	30 June 2018
Total assets	51,681	51,259	50,869	49,938
Exploration and evaluation assets	39,630	39,630	39,630	39,656
Working capital	6,610	6,793	6,189	5,959
Total shareholders' equity	38,115	38,284	37,688	37,274
For the three months ended:	30 September 2017	31 December 2017	31 March 2018	30 June 2018
Revenue	2	-	1	2
Loss	(770)	(5)	(655)	(494)
Loss attributable to common shareholders	(770)	(5)	(655)	(494)
Income per share-basic and diluted (cent)	(0.001)	(0.000)	(0.001)	(0.001)
As of:	30 September 2016	31 December 2016	31 March 2017	30 June 2017
Total assets	52,763	52,127	52,164	51,890
Exploration and evaluation assets	39,618	39,618	39,618	39,630
Working capital	9,974	9,458	7,289	7,130
Total shareholders' equity	41,561	40,875	38,662	38,607
For the three months ended:	30 September 2016	31 December 2016	31 March 2017	30 June 2017
Revenue	3	2	3	2
Loss	(586)	(770)	(2,955)	(266)
Loss attributable to common shareholders	(585)	(769)	(2,954)	(266)
Loss per share-basic and diluted (cent)	(0.001)	(0.001)	(0.003)	(0.000)

The Group is an exploration company with limited revenue which is not material. The Group's loss and loss per share relate to the Group's operations during a particular period and are not seasonal in nature.

Quarter 3–4 2016: General and administrative (“G&A”) expenses decreased in 2016. This was driven predominately by the relocation of the Dublin office and the associated saving with this. Further reductions were made through a reduction in advisor costs and close management of overall expenses incurred by the Group.

The Group's exploration and evaluation (“E&E”) expenses also decreased relative to 2015 and was attributable to savings materialising from the restructuring the Group's technical function and the non-occurrence of costs incurred from the updating of the environmental management plan requested by the South African PASA.

Quarter 1 2017: There was a significant movement in the fair value of the outstanding warrant in 2017. The loss is predominately driven by Falcon's share price which increased relative to 2016 due to the positive results relating to the Group's Australian E&E asset in the Beetaloo basin. The most significant announcement was on 15 February 2017 when Falcon announced that Origin had submitted the Discovery Evaluation Report to the Northern Territory government. The submission followed the completion of the EPT at the Amungee NW-1H exploration well of the “B Shale” member of the Middle Velkerri Formation. The report provided volumetric estimates and recovery / utilisation factor for the B Shale member of the Middle Velkerri Formation within permits EP76, EP98, and EP117. Origin also prepared a contingent resource estimate using probabilistic methods and reservoir evaluation data.

Quarter 1 2017 also had an increased share based compensation expense due to the granting of options to purchase 6,000,000 common shares of Falcon to Anne Flynn, Chief Financial Officer of Falcon under the approved stock option plan. The Options were granted at an exercise price of CDN\$0.20 and had a vesting schedule allowing 1/3 of the Options to vest immediately with an additional 1/3 vesting on each subsequent anniversary until the Options are fully vested on 22 February 2019.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

Quarter 1 - 4 2017: G&A and E&E expenses continued to decrease year on year due to the continued focus on managing costs by the Group.

There was a decrease in the share based compensation expense in 2017 relative to 2016 due to the vesting schedule of the 38.7 million options granted in 2016.

There were foreign exchange gains in 2017 relative to the losses incurred in 2016 due to favourable movements to the US dollar during the year.

Quarter 1 2018: E&E expenses continued to decrease period on period due to the continued focus on managing costs by the Group.

G&A expenses increased due to higher filing fees due to the improved market capitalisation of the Group throughout 2017 driven by the positive news relating to our Australian E&E asset, further increases related to investor related expenses with the appointment of RBC Capital Markets as joint broker.

Quarter 2 2018: Similar to Q1 2018, E&E expenses continued to decrease due to the continued focus on managing costs by the Group. G&A expenses, like Q1 2018, increased due to higher filing fees due to the improved market capitalisation of the Group throughout 2017 driven by the positive news relating to our Australian E&E asset, further increases related to investor related expenses with the appointment of RBC Capital Markets as joint broker.

There was a decrease in the share based compensation expense relative to 2017 due to the vesting schedule of the share options granted in previous years.

For further details of 2018 updates please refer to the Beetaloo basin, Northern Territory, Australia – Current Activity section of this document.

Generally, the Group's total assets, exploration and evaluation costs, working capital and total shareholders' equity fluctuate in proportion to one another until such time as the Group completes additional financing.

LIQUIDITY AND CAPITAL RESOURCES

Going Concern

For the year ended 31 December 2017, the Group incurred losses of \$4 million, had operating cash outflows of \$1.9 million and a retained deficit of \$390.2 million. For the six months ended 30 June 2018, the Group incurred losses of \$1.1 million, had operating cash outflows of \$1.3 million and had a retained deficit of \$391.4 million.

As at 30 June 2018 the Group had cash and cash on deposit of \$7.7 million.

Giving due consideration to the cash requirements of the Group, the Board has a reasonable expectation that the Group will have adequate resources to continue in operational existence for the foreseeable future. For this reason, the Board continues to adopt the going concern basis in preparing this financial information which assumes the Group will be able to meet its liabilities as they fall due for the foreseeable future.

Working Capital

Cash and cash on deposit as at 30 June 2018 was \$7.7 million, with movement of \$1.3 million from \$9 million as at 31 December 2017. Working capital as at 30 June 2018 decreased to \$6 million from working capital of \$6.7 million as at 31 December 2017.

The increase to cash and cash equivalents was the result of net cash generated by investing activities of \$3.5 million, offset by net cash used in operating activities of \$1.3 million.

Accounts Receivable

Current accounts receivable as at 30 June 2018 were \$0.2 million, which includes \$0.1 million receivable and prepayments of \$0.1 million.

Accounts Payables and Accrued Expenses

Accounts payable and accrued expenses as at 30 June 2018 were \$0.6 million which includes \$0.1 million for accounts payable and \$0.5 million accrued expenditures.

Capital Expenditures

For the period ended 30 June 2018 the following expenditure commitments exist.

Australia - Beetaloo Basin, Northern Territory, Australia

The Group is conducting a nine well drilling programme with its joint venture partner, Origin. The details are as follows:

- Origin to pay the full cost of the drilling of the next vertical well and the drilling and fracture stimulation of two horizontal wells, 90 day production tests and micro seismic with a capped expenditure of approximately A\$65 million, any cost overrun funded by each party in proportion to their working interest.
- Origin to pay the full cost of the final two horizontally fracture stimulated wells and 90 day production tests capped at A\$48 million, any cost overrun funded by each party in proportion to their working interest.

Originally the Group indicated that it expected the work on the first five wells to be completed in 2016, the next two horizontally fracture stimulated wells to be undertaken in 2017 and the final two horizontally fracture stimulated wells to be undertaken in 2018. The introduction of a moratorium on hydraulic fracturing will delay the completion of the nine well programme.

Pending the outcome of the inquiry and the government decision, Origin requested a suspension of all drilling operations with the DPIR and were granted a 12 month extension. On 17 April 2018, the Northern Territory government announced they would lift the moratorium on hydraulic fracturing. Resumption of field work with our joint venture partner, Origin will start as soon as practical, adopting recommendations of the scientific inquiry and obtaining necessary approvals to complete the remaining work programme.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

South Africa - Karoo Basin, South Africa

On granting of an approved exploration right in South Africa, the Group will be required to make a payment to the South African government of approximately \$0.7 million.

Hungary - Makó Trough, Hungary

As at 30 June 2018, the Group's cumulative expenditures for the Production License and Exploration Licenses, including the acquisition, seismic testing, drilling of exploratory wells, and initial testing and completion of wells, was approximately \$245 million.

The Group is not planning any independent technical operations in Hungary, and as such no material capital expenditures are expected.

Lease commitments

The Group has the following lease agreements for office space in:

- Budapest, Hungary which expires in July 2018; and
- Dublin, Ireland, which expires in April 2021, with a break clause exercisable in April 2019.

The Group's future minimum rental commitments under non-cancelable operating leases at 30 June 2018 and 31 December 2017 were as follows:

	As at 30 June 2018 \$'000	As at 31 December 2017 \$'000
2018	20	46
Thereafter	13	10
Total	33	56

Debt and Equity Capital

The availability of debt and equity capital, and the price at which additional capital could be issued will be dependent upon the success of the Group's exploration activities, and upon the state of the capital markets generally.

Falcon Oil & Gas Ltd.
Management's Discussion & Analysis
For the Three and Six Months Ended 30 June 2018

DISCLOSURE OF OUTSTANDING SHARE DATA

The following is a summary of the Company's outstanding share data as at 30 June 2018 and 22 August 2018:

Class of securities	30 June 2018	22 August 2018
Common shares	930,704,183	930,704,183
Stock options	41,633,334	41,633,334
Warrant	10,000,000	10,000,000
Fully diluted common shares	982,337,517	982,337,517

LEGAL MATTERS

The Company may, from time to time, be involved in various claims, lawsuits, disputes with third parties, or breach of contract incidental to the operations of its business. The Company is not currently involved in any claims, disputes, litigation or other actions with third parties which it believes could have a material adverse effect on its financial condition or results of operations.

TRANSACTION WITH NON - ARMS LENGTH PARTIES AND RELATED PARTY TRANSACTIONS

The following are the related party transactions which occurred during the period:

Senzus Kft

On 1 January 2013, Senzus Kft. agreed the terms on which it would provide the geological services of Dr. Gábor Bada to TXM. The agreement was terminated on 28 April 2015. A separate agreement was entered into on 28 April 2015, which expired on 31 March 2016. The contract was renewed with an effective date of 1 April 2016 and was subsequently terminated on 28 February 2017. Senzus Kft. was paid no consultancy fee for the period ended 30 June 2018 (2017: \$17,000).

Senzus Plus Tanácsadó Bt.

On 1 March 2017, Senzus Plus Tanácsadó Bt. agreed the terms on which it would provide the geological services of Dr. Gábor Bada to TXM. The contract was subsequently terminated with effect on 28 February 2018. It was paid a consultancy fee of \$9,700 for the period ended 30 June 2018 (2017: \$11,500).

Geoportal Plus Tanácsadó Bt.

On 1 March 2018, *Geoportal Plus Tanácsadó Bt.* agreed the terms on which it would provide the geological services of Dr. Gábor Bada to TXM. It was paid a consultancy fee of \$12,524 for the period ended 30 June 2018 (2017: \$0).

Oakridge Financial Management Inc.

The Group has engaged Oakridge Financial Management Inc. to assist in submitting returns to the Canadian Revenue Agency. Mr. Greg Smith, a current director of Falcon, is the sole shareholder in Oakridge Financial Management Inc. The Group has incurred costs of approximately CDN\$316 (2017: CDN\$485) to Oakridge Financial Management Inc. during the period ended 30 June 2018.

OFF-BALANCE SHEET ARRANGEMENTS AND PROPOSED TRANSACTIONS

The Company does not have any off-balance sheet arrangements, other than operating leases (as disclosed on page 27 in this document) and payments with regards overriding royalties as disclosed within section "Overriding Royalty Beetaloo Basin exploration permits" on page 8. The Company has no proposed transactions.

FINANCIAL INSTRUMENTS AND OTHER INSTRUMENTS

Derivative financial instruments

Derivatives (including embedded derivatives) are initially recognized at fair value of the date a derivative contract is entered into and subsequently re-measured at their fair value. The method of recognizing the resulting gain or loss depends on whether the derivative is designated as a hedging instrument, and if so, the nature of the item being hedged. The Group has not designated any derivatives as hedges as at 30 June 2018 or 31 December 2017. The Group's sole financial instrument is a warrant. The Group has not entered into any contract for "other instruments" during 2018. The Group has no "other instruments" as at 30 June 2018 or 31 December 2017.

Warrants

Warrants which do not meet the criteria to be classified as an equity instrument are classified at fair value through the statement of operations and comprehensive loss and are recorded on the statement of financial position at fair value. Transaction costs are recognized in the statement of operations and comprehensive loss as incurred.

The fair value of the warrant and the incentive stock options granted to employees is calculated using a Black Scholes option pricing model. Measurement inputs include share price on measurement date, exercise price of the instrument, expected volatility (based on weighted average historic volatility adjusted for changes expected due to publicly available information), weighted average expected life of the instruments (based on historical experience and general option holder behavior), expected dividends, and the risk-free interest rate (based on government bonds). A forfeiture rate is estimated on the grant date and is adjusted to reflect the actual number of incentive stock options that vest.

The composition of the derivative liabilities as at 30 June 2018 and 31 December 2017, and the changes therein for the periods then ended, are as follows:

	Warrant \$'000	Total \$'000
At 1 January 2017	227	227
Derivative loss - unrealised – outstanding warrant	1,336	1,336
At 31 December 2017	1,563	1,563
Derivative gain - unrealised – outstanding warrant	(227)	(227)
At 30 June 2018	1,336	1,336

The terms of the warrant are as follows:

Warrant issue	Date of issue	Number of common shares issuable under warrant	Exercise Price CDN\$	Proceeds from warrant* CDN\$'000	Expiry date
Warrant	13 July 2011	10,000,000	0.19	1,900	13 January 2020
Total		10,000,000		1,900	

*Proceeds from warrant are subject to the warrant holder exercising their warrant.

On 3 October 2017, Falcon announced the transfer of the warrant to acquire 10,000,000 common shares in the capital of Falcon by Hess Oil and Gas Holdings Inc. to Nicolas Mathys. The terms of the warrant remain unchanged, with an exercise price of CDN\$0.19 per share and an expiry date of 13 January 2020.

NEW ACCOUNTING PRONOUNCEMENTS

The Interim Condensed Consolidated Financial Statements (“**Interim Statements**”) of the Group have been prepared in accordance with IAS 34 ‘Interim Financial Reporting’ and, on the basis of the same accounting principles as, and should be read in conjunction with, the Consolidated Financial Statements for the year ended 31 December 2017 (pages 9 to 14) as filed on the Canadian Securities Administrator’s System for Electronic Document Analysis and Retrieval (SEDAR) at www.sedar.com.

There are no amended accounting standards or new accounting standards that have any significant impact on the 30 June 2018 interim statements.

BUSINESS RISKS AND UNCERTAINTIES

Risks and uncertainties that could cause the actual results to materially differ from current expectations have not changed from those disclosed in the Company’s AIF dated 11 April 2018.

CRITICAL ACCOUNTING ESTIMATES

Critical accounting estimates that could cause the Company’s actual results to materially differ from current expectations have not changed from those disclosed in the Company’s MD&A and Consolidated Financial Statements for the year ended 31 December 2017 and 2016.

MANAGEMENT’S RESPONSIBILITY FOR MD&A

The information provided in this MD&A is the responsibility of management. In the preparation of this MD&A, estimates are sometimes necessary to make a determination of future values for certain assets or liabilities. Management believes such estimates have been based on careful judgments and have been properly reflected in this MD&A.

The audit committee has reviewed the MD&A with management and has approved the MD&A as presented.
